

ADAMA

HURRICANE® SC

Hurricane® SC is a residual herbicide for use in cereals to control a broad spectrum of broad-leaved weeds.

It is also a key active in black-grass programmes and contributes towards annual meadowgrass control when mixed with partner products.

Key Benefits

- Broad spectrum broad-leaved weed activity
- Proven additive benefit in black-grass programmes
- Flexible; residual activity provides enhanced weed control even in dry soils where germination is protracted

Crop Information

Crop	Max individual dose (L/ha)	Max total dose (L/ha)	Timing and recommendations
Wheat, barley, durum wheat	0.25	0.25	Before end of February in year of harvest
OR			Before 2nd node detectable stage (up to BBCH 31)
Wheat, barley	0.2	0.2	
Rye, triticale	0.2	0.2	Before 3 leaves unfolded

Product Information

Active ingredients:
500g/L diflufenican

Formulation:
Suspension Concentrate

Pack size: 1 litre

Application Information

Water volume: 200-250L/ha

Spray quality: Medium

Aquatic buffer: 6 metres

Aim for 125 gai/ha, top up pre emergence partner
